Lobedu themselves. The society is remarkably egalitarian and there is no concentration of wealth in the hands of the ruling group. Nor would this be easy in a tribe in which the limited resources in property (in cattle) are used primarily for, and are constantly being converted into, marriage alliances.

Other distinctive features of the Lobedu are their marked agricultural bias; a fertility cult with sacred drums; masked dancing; ritual arrangements in ancestor worship (in the form of impersonation of the spirits, the predominance of beer offerings and the *phasa* rite of spurting water out of the mouth as an accompaniment to prayer) which link them more closely to the tribes to the north than to their southern Nguni and Sotho neighbours where the blood sacrifice and cattle cult are more clearly marked.

Agnatic Groupings

Despite the fact that they are ruled by a queen and that women can and do hold important political and religious positions the Lobedu are a patrilineal people in the sense that a man belongs to his father's lineage, property is inherited in the male line and marriage is patrilocal. The tribe is made up of a large number of different totemic groups, Lion, Elephant, Crocodile, Wild Pig, none of which, not even the royal Lobedu totem, is confined to the Lobedu tribe. All these totems are found in neighbouring tribes and many also in other parts of the Transvaal and elsewhere. A few groups have no totem (*motupo*) but designate themselves by their place of origin, e.g., *Mokhalaga*. Groups which have the same totem do not consider themselves related if they come from different places of origin. Elephant of Khalaga are thus unrelated to Elephant of Tsubye or Elephant of Thobolo. People sometimes swear by (*ana*) their totem and are supposed to but do not always abstain from eating it. The totemic name is useful only as a distinguishing mark; e.g., in divination the bones may indicate a person of the Elephant or Lion totem as responsible for illness or theft. Beyond this the *motupo* has little meaning and today many of the young people do not even use the term. The totemic group is not exogamous.

The lineage has no distinguishing name, the term *moloko* or

5:Krige E-5 (1936-1938,1961-1962) 1964
FX14 Lovedu FX14

often, if at all, only after the death of both the father and his heir, the eldest brother who succeeded him as head of the homestead. Full independence is not an ideal that is striven for.

In its early stages the new unit or incipient 'house' is still dependent on the bridegroom's natal house (house of orientation). The new bride works for her mother-in-law. She has no fields of her own to begin with, no utensils, nor a hearth and very often not even a sleeping hut of her own, the young couple using the mother-in-law's sleeping hut while she sleeps in her kitchen hut. The bride cooks on her husband's mother's hearth, works with her husband in a field allocated to them and helps her mother-in-law in hers. The husband will, if he has not done so before bringing his bride home, build her a new hut after the marriage at any time convenient to him. Simeon made sun-dried bricks himself, paid one pound to have the walls built, had a work-party for the framework of the roof and did the thatching himself. A man's father may help him but usually a young man uses his own money earned by previous migrant labour.

A woman cooks for her mother-in-law until a new bride, either of her husband's brother or of her husband arrives when she may be given her own pots. When Simeon's second wife arrived both wives cooked together for the mother-in-law for a while. Then when they began to disagree one (the younger one in this case because she was unrelated) was given her own pots to cook separately. Being given her own hearth is an important thing in a woman's married life marked by a little ceremony and a visit home to announce her new status. Even when she has her own hearth, however, she must continue to provide food for her parents-in-law. Children are thus an insurance against old age and it is the duty and responsibility of a son, more particularly the youngest son, to care for his mother in her old age. The father may have young wives to care for him when his elder sons are married.

Even after his marriage a man remains under the jural control of, and subordinate to, his father. Only after his father's death is he free to choose whether to remain in the village under the heir or to hive off. Sometimes, though rarely, a married son does, however, quarrel with his father and move away. Mostly

5:Krige E-5 (1936-1938, 1961-1962) 1964
FX14 Lovedu FX14

such a quarrel involves the mother rather than the son and the whole house hives off, the son taking his mother with him.

The birth of the first child is an important step in the development of a house. The Lobedu child is born in a homestead in which there are at least three generations represented—that of the grandmother, that of the parents, including usually also the father's brothers and unmarried sisters and that of his own contemporaries. The first child is tended largely by the father's mother while the mother goes about the hard work of stamping, working in the fields, fetching firewood if there are no young sisters of the husband to help, and cooking.

The husband's mother is an essential part of the household and has a dominating influence. She controls and advises her son, especially in regard to his relations with his wife and the needs of his children, and he usually defers to her knowledge and experience. Long after her sons are married and even when they have grandchildren the unit is known as her *mosha* (house). It would seem that a unit of husband, wife and child would hardly be viable in a subsistence economy based predominantly on the agricultural activities of the women. Even the smallest Lobedu homestead includes the husband's mother. It is only when there are several adolescent children or the cash earnings of the husband enable a wife to buy the staple food instead of relying wholly upon what she grows herself that smaller units can survive. Even then they generally live near, and attach themselves to, some relative.

Once children are born, the wife's brother (mother's brother to the children) begins to play a part in forging links between them and the relatives on the mother's side. He will give gifts to the sister's son (*mudukulu*) who often goes to stay for a while with his mother's people; and in his turn the sister's son whenever he returns from migrant labour will be expected to give a gift to his mother's brother. Sometimes he also helps a mother's brother with cattle to marry. As the size of a man's family increases more fields may be needed to feed the children and very often these are obtained by the wife from her own people.

The marriage of the first daughter brings about the first acquisition by the developing house of a large amount of property in bride-price and ensures, even in the absence of sons, the continuation of the house. As important is the fact

5:Krige E-5 (1936-1938, 1961-1962) 1964
FX14 Lovedu FX14

wife also died, he sent the children to her sister to be reared and gave her his deceased's wife's fields to cultivate to provide food for the children. When they are big they will be brought back with a gift of beer and their father will give a thanking gift of an ox or money for the rearing of the children.

The utensils of a deceased wife remain in her hut to be used by her children or son's wives; and her eldest son has the right to inherit her fields. Until twenty years ago when it was still the custom for a mother to receive a cow and calf on the marriage of her daughter (if a virgin) in recognition of having reared her, this portion of the bride-price was the special inheritance of the youngest son with whom she generally lived until her death.

When the father of a polygynous family or the head of a homestead dies there is, owing to the property arrangements characteristic of the Lobedu and their attitude to its possession, never a great deal of heritable property. The property of each house is inherited by the eldest son of that house. The heir to the position of head of the homestead is the eldest son of the chief wife. Only he or the uterine brothers of his father are responsible for his father's debts—not the sons of other houses. It is generally stated in discussions that any cattle or goods acquired by the father as his personal possessions should be inherited by the chief son and heir. In practice it is more common to divide out such property among all the sons and daughters.

When Ramalepe, a rain doctor, died about three years ago all his cattle and goods were divided equally among his sons. His rain medicines and his field went to his chief wife's son; his mealies (from his own field) were equally divided between his wives and his uterine sisters. When Philip's father died there was no sister of his father still living so Philip went to the queen and asked her what to do. She told him to call his sisters and to divide out the property in consultation with them. He then called his sisters (eldest and other daughters of his father) and showed them the property—thirty-six goats. They agreed on dividing the goats as follows: the deceased's two elder daughters by his first wife were given ten goats each; Philip, a son by the second wife, received eight; Mutzere, sister's son to deceased, was given one goat to kill and eat at his home; one goat was

5:Krige E-5 (1936-1938, 1961-1962) 1964
FX14 Lovedu FX14

the court cases. Later, when the heir came of age, a new homestead was built. When Mabulana died in the 1940's his daughter, a married woman who does not live in the area was made official district head. Her mother's brother came specially from the Capital to live in the area and help her by conducting cases.

The mother's brother is considered to be eminently suitable as adviser to a ruler. The queen, too, traditionally has a mother's brother as chief councillor. A mother's brother has no claim to succession yet is deeply interested in the welfare of his sister's child. He will see to it that the sister's child gets his rights. The position of the son of the *khadi* who is acting as regent is somewhat different. There is a Lobedu proverb saying '*Bya thoga monye bo dula mudubulu*—where a master is lacking there sits the nephew'. And it is true that the son of a woman regent is often ruler in all but name. In the 1930's there were two blatant cases in which the rightful heirs of district heads who had long reached man's estate seemed in danger of permanently being ousted. In both cases in the long run when the *khadi* died the rightful heir was installed, in one of the cases on the expressed dying wish of the *khadi*. Right seems to prevail in the long run.

The Homestead Through Time

Basically a homestead consists of a group of 'houses' belonging to the wives of the head or of the head and his half-brothers. Other relatives may attach themselves to it but the core remains the group of agnates.

Many of the smaller homesteads that have all the appearance of being independent are found upon investigation to be portions (a 'house') of a neighbouring homestead, which has become separated in space but still considers itself part and acknowledges the authority and control of the senior homestead near by. The most obvious case of this arises where, owing to quarrels between co-wives, a husband has placed one of the wives in a homestead of her own and visits her there. If a wife has a married son then in the event of serious quarrels there is more likely to be a hiving off, the son moving to a different area with his mother and siblings.

In Figure 5 a very small homestead is shown. Here the

5:Krige E-5 (1936-1938, 1961-1962) 1964
FX14 Lovedu FX14

woman, K, has, during her husband's prolonged absence in a labour centre, moved away from her fellow wives into another district in order to be near her married daughter. She lives in a small homestead with her married son, who is absent doing migrant labour, and her other children. In contrast to this is the homestead of a neighbour of hers who has five wives and

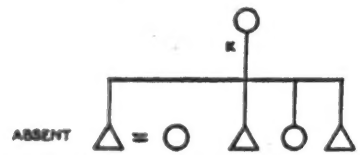

FIG. 5. Composition of a very small homestead.

whose ten brothers together with their wives and children still live with him in the homestead—a total of sixty-eight inmates (twenty-nine adults, thirty-nine children). Of these three married and two unmarried men are away doing migrant labour.

The domestic group indicated in Figure 6 originally lived in one homestead.

On A's death his chief son, B, inherited his youngest wife (No. 3) who as yet had no children. They all moved out of the old homestead, the sons (B and D) of A's two elder wives

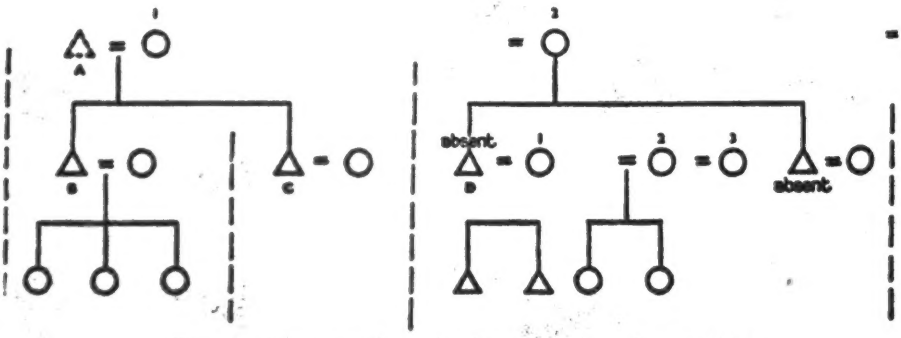

FIG. 6. Segmentation of a homestead on 'house' lines.

building separate homesteads next to one another, where I found them in 1938. The women in the homestead of D considered themselves part of the homestead of A and in the

5:Krige E-5 (1936-1938, 1961-1962) 1964
FX14 Lovedu FX14

absence of their menfolk at labour centres, reported everything that took place to B. Later C moved away from his uterine brother B and in 1961 there were three separate homesteads.

The cleavage in a homestead then is on 'house' lines, though uterine brothers living together after the death of their father also eventually separate. The break may be the result of an accusation of witchcraft or there may be an amicable separation as in the case described above. Reasons for separating vary: Batamedi moved away from his uterine brother, a district headman, to satisfy political ambitions—he hoped to be made headman of an area to which his family had an ancient claim; Poke, a married man, left the homestead of his brother with his mother and siblings for health reasons, suspecting that someone in the homestead might be bewitching him and hoping that a change would improve his condition. After many years in a different district, he returned to live in the original homestead. Sons do not move away before the death of their father unless there has been a quarrel in which their mothers are involved, or unless they become Christians and marry Christian girls. Even the death of the father does not necessarily bring about the separation of his sons; brothers and half-brothers may live together for years. As they marry more wives the size of the families increases, the homestead becomes more congested, the likelihood of quarrels greater and gradually the 'houses' move asunder. If half-brothers and brothers have not separated before, then the final break-up of the old homestead will come with the death of the eldest brother. For it is rare for a man to live under a young heir of the generation below him. Close religious and social ties, however, persist long after separation. Half-brothers continue to 'inherit' each other's wives and there may be a good deal of co-operation in work-parties and much consultation in family affairs. Lobedu homesteads are stable over long periods and there is a great value attached to remaining together.

Preferential Marriage down the Generations

The development of the 'houses' in a homestead, leading to the gradual segmentation of the domestic group and separation of

LOBEDU PROPERTY, MARRIAGE AND FAMILY

APPENDIX I

THE manner in which many of the characteristics of Lobedu marriage arrangements operate in practice is illustrated in the case of the lineage segment of A and his descendants set out in Figure 9. The arrows in the diagram all represent the passage of women in preferential marriage from their parental home to that of their husband: single arrows indicate women of the mother's brother's family (i.e., the Mabulanas) who have married into A's lineage (Matsui); double arrows indicate the departure of women of A's lineage to marry at their father's sister's. The following are points to be noted:

(a) The tendency for Lobedu polygynists to marry more than one wife from the same family is seen in Figure 9 in A's marriage to his fourth wife who was his second wife's brother's daughter.

(b) The manner in which cross-cousin marriage perpetuates links with the wife's kin down the generations is illustrated by the marriages of A's sons G, H, W and X. G's fourth wife, H's third wife and W's first wife all come from the same lineage, that of their mothers (A's second and fourth wives). A's son X's third wife is also his uterine cross-cousin but it was not practicable to indicate her family of origin also in the diagram.

(c) Besides reinforcing links with the maternal kin, mother's brother's daughter marriage serves also to knit together descendants of a man and his sisters. The bonds between A and his sisters B and C have been kept alive over a span of two generations of their descendants by the marriage of A's daughter D to I (daughter of his sister B) as indicated by the double arrow in Figure 9, and the marriage of A's daughter E to Z (son of J, and grandson of A's sister, C). Similarly G's daughter N by his first wife is married to the son (M) of his sister L (see double arrows), and H's daughter K is married to her father's sister E, widow of Z, a marriage which took place in 1961.

(d) The part played by cattle links in ensuring preferential marriage is also illustrated in the diagram; but it is clear too that children of brother and sister who are *not* cattle-linked often also marry one another. Z married E because of cattle-links two generations above him as is explained below. But when E grew old and needed a 'wife' G had no suitable daughter; so H's daughter K 'married' her. Cattle-links also did not account for the marriage of A's daughter, D, to his sister I, nor of G's daughter N to his sister L's son M. These indicate the tremendous value attached to maintaining links with married sisters. The reasons for the marriage of

5:Krige E-5 (1936-1938, 1961-1962) 1964
FX14 Lovedu FX14

582 583 591 602 613 E to Z are complicated and indicate how personal and other factors may interfere with the best-laid cattle-linking arrangements. C, the cattle-linked sister of E's father, A, had no son; so C gave the bride-price of her only daughter, J, to her brother A in accordance with procedure described in the text of this essay. All but one of these cattle died shortly after and then A said he did not want the cattle. C then tried to establish a 'house' with her daughter's cattle by handing over the remaining head of cattle to a classificatory brother (her father's half-brother's son). Her husband augmented this head of cattle by others obtained with his earnings from migrant labour. Unfortunately, however, these cattle instead of being used for marriage were 'eaten' (squandered) by her 'brother' and the whole plan came to nothing. Now, because E's father A had used C's cattle to marry his first wife and then had married E's mother with the bride-price of D (a daughter of his marriage to his first wife), therefore A, repenting of his earlier treatment of C and realizing he was indirectly indebted to C (and J) also for his second wife (mother of E), sent his daughter E to 'cook for J' (C's daughter) and marry her son.

(e) An example of the judicious placement of cattle for purposes of promoting marriage alliances between one's own male descendants and the daughters of a friend or relative in a preferred family is to be found in the action of P in Figure 9, who was married to R the daughter of A's half-sister F. After his son's death he gave his daughter S's, bride-price to G (a descendant of his wife's mother's brother) who acquired his third wife T with it. P has thus 'built a house' (that of T) where his son's son Y will find a wife.

582 591 [634] (f) Three instances of the marriage of a woman to another woman are to be found in the lineage-segment of A—that of D to I; that of K to E, widow of Z; and that of A's daughter N to the queen. In the first case I wished to raise an heir to her deceased brother, in whose place she was ruling a district; in the second case E had daughters but no son and she wished to have someone to 'cook for' her; in the case of N, her father A as district headman had sent his daughter to be a *motsanoi* of the queen.

613 582 581 (g) That the same lineage can be both wife-receiving and wife-giving in respect of the queen is illustrated by the fact that A's father had received in marriage from the queen a wife Q but A had also sent his daughter N to marry the queen.
